

AP-Journal™

AP-Journal performs real time detection of database changes and access attempts, supports long term storage of critical information, and enables analysis of business items.

Overview

iSecurity™ AP-Journal is an Application Security and Business Analysis Solution for the Power i.

AP-Journal protects business-critical information from insider threats as well as external security breaches. It keeps managers closely informed of important changes in their business-critical data and streamlines journaling procedures.

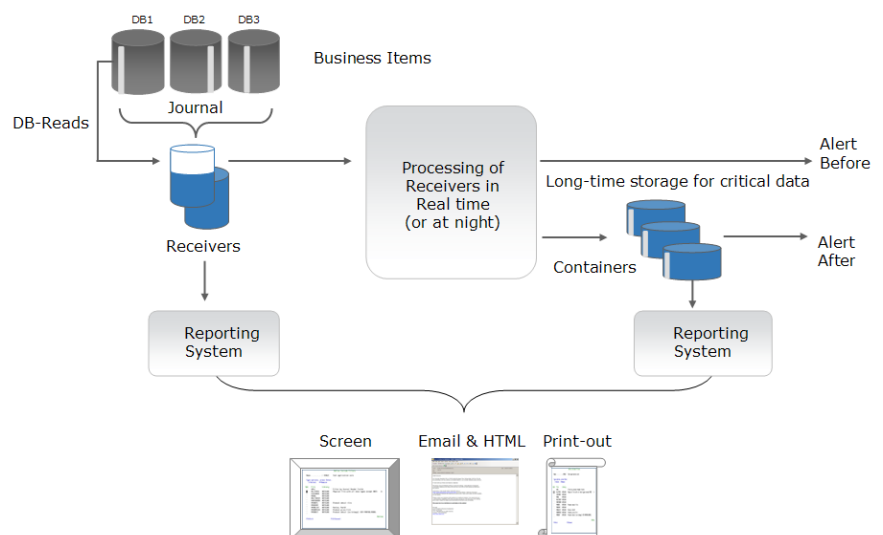

Users can integrate information from various files and view all changes relating to a specified business item. In addition, AP-Journal helps enforce business rules by triggering external functions.

With its unique technology, AP-Journal logs database access (READ operations) directly into the journal receivers. This functionality is not provided by OS/400 journaling, and constitutes an important component of compliance.

By providing a timeline report of all changes relating to application data, AP-Journal reduces unauthorized activity and enables users to meet regulatory requirements. It also issues real-time alerts to inform managers of any changes in application databases or unapproved access to critical data.

Key Features

- Addresses PCI, SOX, HIPAA, etc. requirements
- Long-term storage of sensitive information, independent of journal receiver lifecycle
- Advanced filtering enables saving only important information, to suit storage limits
- READ operations selectively added to Journal, for compliance with PCI requirements
- Real-time alerts on changes in business-critical data & access, sent as operator messages, e-mail, SMS, SYSLOG; CL Scripts execution
- Timeline & cross-application reports based upon user-defined business items
- Report data can include key fields, description fields and modified fields (highlighted)
- Output as Online, Print, HTML, PDF, Outfile & Email
- Filter according to “before” or “after” values of each database field. Boolean And/Or, EQ, GT, LE... N/LIKE, N/LIST... conditions refer to percentage or absolute value changes
- Runs on a High Availability system, reducing performance impact on Production Systems
- Real-time or scheduled operation mode

Examples of AP-Journal Reports & Conditions

- Who modified file PAYMENTS between 20:00 and 06:00 during vacation; among those, who reduced the PAYMENT_AMOUNT by more than 15%?
- Who worked on the SALARY file during non-standard business hours, and accessed employees whose salaries exceed \$5,000 monthly?
- Provide John with a timeline report of all changes made to his MORTGAGE (covering the dozens of files in the MORTGAGE application), during the past 25 years.
- Send an SMS message and e-mail to the company's Chief Security Officer when the PRICE_OF_ITEM changes by more than 4%.
- Send a SYSLOG message and operator message when the PRICE_OF_ITEM for an ITEM shipped last month changes by more than \$6.20.
- Send an e-mail when anyone accesses the record of an employee whose monthly SALARY is greater than \$5000.
- What users who are not in the HR department modified the SALARIES table?
- What changes to the hospital's PATIENTS file were made via utility application DFU?

AP-Journal Alert Conditions Screen

AP-Journal Configurations

- **Business Analysis and BizAlerts** – secures business-critical applications and issues real-time messages and/or e-mail alerts when user-defined thresholds are crossed. The product generates instantaneous filtered reports covering changes in application data from all relevant applications over periods spanning numerous years .
- **Application Trace** – enables viewing field changes in files that contain a common key or identifier. The files comprising the set can easily be defined and filter conditions can be set to expedite performance and quickly display the business-critical data that has changed.
- **Regulation Compliance** – enables quick viewing of field-level changes in up to two application files.
